Would You Know When You've Gone Too Far?

PUNTA GORDA, Fla. (May 15, 2017)—Mental health is essential to everyone's overall health and well-being, and mental illnesses are common and treatable. But people experience symptoms of mental illnesses differently—and some engage in potentially dangerous or risky behaviors to avoid or cover up symptoms of a potential mental health problem.

Sometimes people—especially young people—struggling with mental health concerns develop habits and behaviors that increase the risk of developing or exacerbating mental illnesses, *or could be signs of mental health problems themselves*.

Activities like compulsive sex, recreational drug use, obsessive internet use, excessive spending, or disordered exercise patterns can all be behaviors that can disrupt someone's mental health and potentially lead them down a path towards crisis.

This May is Mental Health Month; Charlotte Behavioral Health Care is raising awareness of *Risky Business* (#riskybusiness). The campaign is meant to educate and inform individuals dealing with a mental health concern understand that some behaviors and habits can be detrimental to recovery—or even mask a deeper issue—but that seeking help is nothing to be ashamed of.

Take the interactive quiz at www.mentalhealthamerica.net/whatstoofar and tell us when you think behaviors or habits go from being acceptable to unhealthy.

Charlotte Behavioral Health Care wants everyone to know that mental illnesses are real, that recovery is always the goal, and that even if you or someone you love are engaging in risky behavior, there is help. It is important to understand early symptoms of mental illness and know when certain behaviors are potentially signs of something more.

We need to speak up early and educate people about risky behavior and its connection to mental illness—and do so in a compassionate, judgement-free way.

When we engage in prevention and early identification, we can help reduce the burden of mental illness by identifying symptoms and warning signs early—and provide effective treatment *Before Stage 4*.

So, let's talk about what is and is not *risky business*. Let's understand where it's important to draw the line, so that we can address mental illness *B4Stage4*, and help others on the road to recovery. For more information, visit www.mentalhealthamerica.net/may.

About Charlotte Behavioral Health Care

Operating for 48 years, Charlotte Behavioral Health Care seeks to optimize health, improve quality of life and build an overall feeling of wellness for all children, adolescents, adults and families in Charlotte County. More than 3,000 children and a total of 15,000 residents are treated annually at CBHC for mental illnesses, behavioral disorders or substance abuse addictions.

CBHC helps individuals find hope for a brighter tomorrow through effective mental health and substance abuse treatment provided to children and families in Charlotte County. For more information, visit www.cbhcfi.org.
